

Foresight Case Study October 15, 2021

Case Study: Foresight, the Automated Subject Matter Expert (ASME) predicts the results of the upcoming Virginia Elections with 100% accuracy 19 days in advance.

On October 15, 2021, Ambassador Michael Gfoeller (ret.) ran a predictive case study with Foresight, the Automated Subject Matter Expert developed by Potentia Analytics, to predict the outcome of the upcoming November 2, 2021, Virginia elections. The [final case study outcome](#) [figure 3] was 100% accurate 19 days in advance of the election results posted on November 3, 2021. Below is the narrative related to this case study.

“Foresight Outperformed the Parties Predictions.” Ambassador Gfoeller (ret.)

Narrative - Ambassador Michael Gfoeller (ret.), the Subject Matter Expert who ran the scenario with Foresight, is a member of the board at Potentia Analytics and is an independent consultant on international politics and security matters who served as Senior Political Advisor to General Petraeus, then commander of U.S. Central Command.

I have done a Foresight prediction for the Virginia gubernatorial election, scheduled to end on November 2. Both early voting in person and voting by mail are allowed in this election. Foresight predicts that Republican challenger Glenn Youngkin has a better than even chance of defeating former Democratic governor McAuliffe and winning this election. It assigned a rating of 69 out of 100 to Youngkin’s chance of victory. The matrix [Figures [1](#) & [2](#)] includes a dozen actors. The analysis took 11 moves.

I am not an expert on the politics of Virginia, but I performed this analysis nevertheless because of its intrinsic interest. I note that Foresight has left the door open to a McAuliffe victory, while concluding that it is a much less likely outcome. Of course, either party’s use of fraud on a truly massive scale would skew the results. In my opinion, the algorithm allows for fraud, but only if it balances out along party lines.

The media are mostly predicting a victory by McAuliffe. However, his lead is within the margin of error. A few polls show Youngkin ahead by a point or two. Democrat commentators are worried about a lack of enthusiasm for McAuliffe. I believe that Foresight may be detecting a largely ignored trend.

I have attached the analytical matrix and graphs below.

ABOUT Foresight™: <https://www.foresightai.ai>

Foresight™ by Potentia Analytics™ is an Automated Subject Matter Expert (ASME) that empowers decision makers to make superior choices with the power of advanced artificial intelligence and machine learning. It can predict the outcome of any situation involving commercial, economic or political, conflict and competition. Traditional technologies predict future results by looking for patterns in historical data, with limited success. Foresight breaks with tradition by leveraging subject matter experts' knowledge and understanding and the power of game theory to predict future events and actions. Foresight leads all other predictive technologies with an accuracy rate exceeding 85% and in many cases is 100% accurate.

For more information about Foresight™ software by Potentia Analytics, visit <https://www.foresightai.ai>™ or reach out to us at inquiries@potentiaco.com.
